SCOUT / CARRIER C

TOP / ROUTED TRACES

Viewed from component side

READ THIS VIEW

Dark red: top traces and pads.

Green: plated pads and vias.

Bright red: Fusion restriction overlay.

Screw rings and antenna rectangle

are exclusion zones, not copper.

DESIGN NOTES

Ground fills hidden for trace review.

Board: 32 x 82 x 1.6 mm.

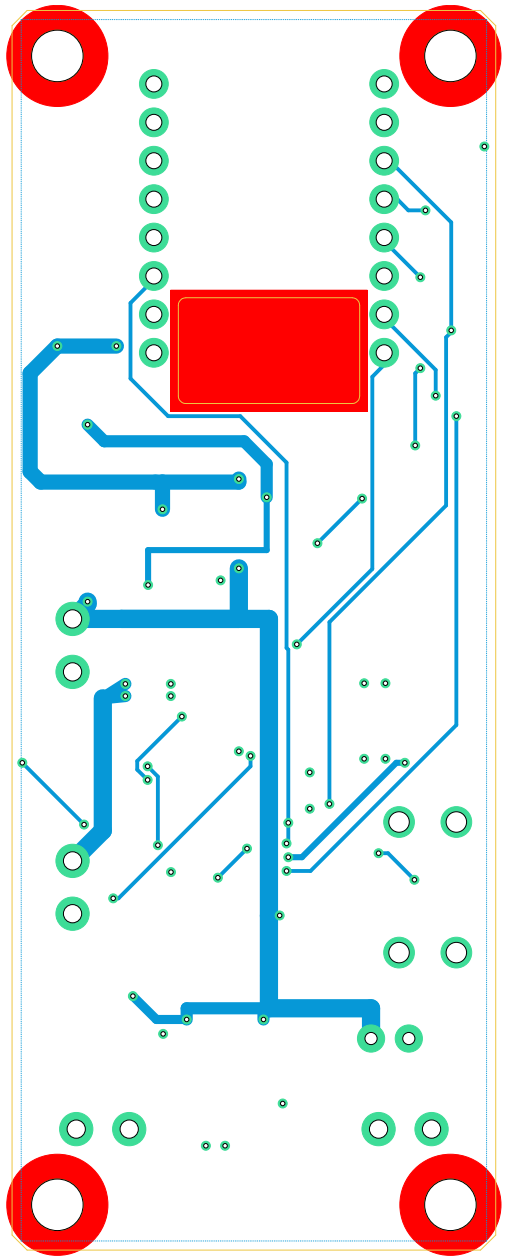

Four 3.4 mm M3 clearance holes.

0.254 mm minimum routed width.

0.20 mm minimum copper clearance.

BOTTOM / ROUTED TRACES

Viewed through board from top; not mirrored

READ THIS VIEW

Blue: bottom-layer routing.

Green: plated pads and vias.

Bright blue/red zones: restrictions.

The antenna and screw zones

must remain clear of copper.

DESIGN NOTES

Ground fills hidden for trace review.

59 through vias, 0.30 mm drills.

528 trace segments across both layers.

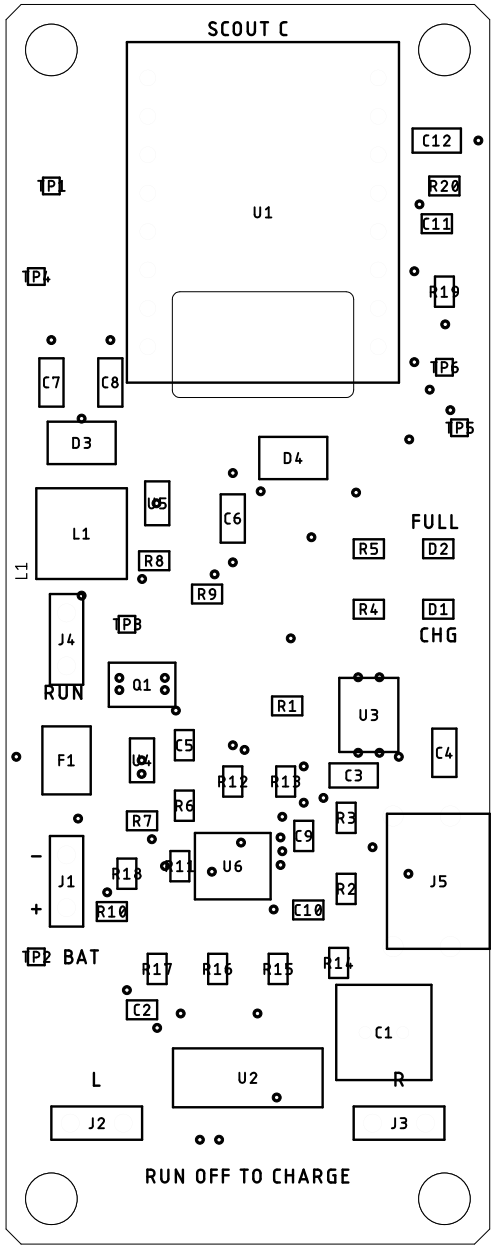

Native DRC: zero reported errors.

Native unrouted connections: zero.

SCOUT / CARRIER C

TOP / COMPONENT PLACEMENT

Viewed from component side

READ THIS VIEW

All components mount on the top.

U1 SuperMini stands above the carrier.

Outlines are library assembly graphics.

J1 battery; J2/J3 motors; J4 RUN.

J5 is the dedicated charging USB.

DESIGN NOTES

Match all polarities to the schematic.

C1, J5 and U1: hand assembly planned.

Bottom silkscreen carries references.

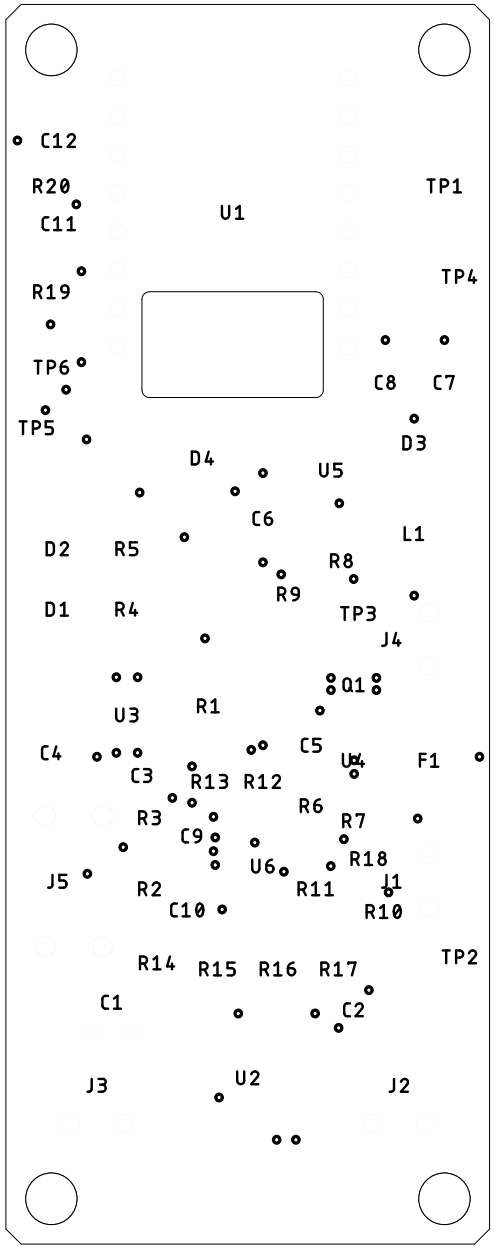

Use the BOM for exact MPNs.

RUN OFF for charging/programming.

SCOUT / CARRIER C

BOTTOM / REFERENCE SILK

Mirrored to view the physical underside

READ THIS VIEW

Reference labels on bottom silkscreen.

No underside component placement.

Holes and board outline shown

for registration and orientation.

Top placement appears on page 3.

DESIGN NOTES

Review actual SuperMini dimensions.

Trial-fit the USB shell stakes.

Confirm JLC assembly stock/rotations.

Bench-test stall current and thermals.

This document is a design review.
